

GK series **LM Guide**

**Rails and Blocks are individually Stocked
for Easy/Fast Interchangeability**

Features of the LM Guide

- 
- 1 Large Permissible Load
 - 2 Ideal 4-column Circular-arc Groove, 2-point Contact Structure
 - 3 Superior Error-absorbing Capability with DF Structure
 - 4 Significant Energy-saving Effect

Features of the LM Guide 1

Large Permissible Load

When comparing a type where the ball contacts R-shaped grooves whose diameters are approximate to the ball diameter (LM Guide) to a type where the ball contacts on a surface (Linear Bushing), the LM Guide has the load capacity of 13 times larger per ball under the same ball diameter condition. As long as the load capacity is identical, using the LM Guide can provide a significant downsizing.

| Fig.1 | Load Capacity of a Single Ball

| Table 1 | Load Capacity of a Single Ball (P), (P1)

	R-shaped groove (P)	Plain surface (P1)	P/P1
ø3.175(1/8")	0.90 kN	0.07 kN	13
ø4.763(3/16")	2.03 kN	0.16 kN	13
ø6.350(1/4")	3.61 kN	0.28 kN	13
ø7.938(5/16")	5.64 kN	0.44 kN	13
ø11.906(15/32")	12.68 kN	0.98 kN	13

Since service life is proportional to the cube of the permissible load, a service life that is approximately 2,200 times longer can be realized.

When comparing the LM Guide to the Linear Bushing whose basic dynamic load rating value is approximate mutually, the cross-sectional area is downsized to $34 \times 24 / 170 \times 165 \div 1/34$.

| Fig.2 | Comparison of the LM Guide with the Linear Bushing

LM Guide Model SR15W
Basic dynamic load rating: 13.8kN

Linear Bushing Model LM80GA OP
Basic dynamic load rating: 7.35kN

Features of the LM Guide 2

Ideal 4-column Circular-arc Groove, 2-point Contact Structure

A 4-column Circular-arc Groove, 2-point Contact Structure adopted in the LM Guide is an ideal contact structure which optimizes the performance of ball raceways.

With a column circular-arc groove, the Guide is extremely less slippery (differential slip), which is generated during the ball movement and can move comfortably.

Comparison of Properties of the LM Guide and a Similar Product

LM guide 4-column circular-arc groove, 2-point contact structure	Competitors' 2-column Gothic-arch groove, 4-point contact structure
Rolling resistance	
<p>LM Guide Model HSR</p>	<p>2-column Gothic-arch Groove</p>
<p>As shown above, there is a slip detected due to differences between the circumferential length of an inner contact diameter (πd_1) and that of an outer contact diameter (πd_2) when a ball spins 360 degrees. (This is called a differential slip.) When this difference is significant, the ball rolls as it slips, causing several score times of friction coefficient, resulting in a sharp rise of the friction resistance.</p>	

LM guide 4-column circular-arc groove, 2-point contact structure	Competitors' 2-column Gothic-arch groove, 4-point contact structure
Movement	
A 2-point contact can be attained toward the load direction when preloaded or loaded, causing less differential slip but favorable rolling motion.	As the differential slip is large on the ball contact surface, the ball rolls as it slips, causing unfavorable rolling motion. In addition, a significant friction is generated under conditions shown below, and such abnormal wear shortens the service life of the Guide. (1) When the Guide is preloaded, (2) When lateral load is applied, (3) When parallelism is poor when mounting 2 or more rails, or (4) When spinning is detected.
Service life	
The Gothic-arch groove, when compared to the circular-arc groove, has approximately 50% decreased load rating and its service life will be reduced to 87.5%.	
Mounting-Surface Accuracy	
An ideal 2-point contact structure with an appropriate contact angle given to a 4-column circular-arc groove helps balls to deform elastically and shift the contact point, so that some errors on the mounting surface are absorbed inside the LM blocks, allowing for a reasonable and smooth movement.	With a Gothic-arch groove, the elastic deformation of balls is inhibited by the balls contacting at four points, disabling the shift of the contact point (inability of automatic adjustment), so that errors on the mounting surface or accuracy error of an orbit stand cannot be absorbed and a smooth movement cannot be attained.
Rigidity	
With the two-point contact, even if a relatively large preload is applied, the rolling resistance does not abnormally increase and high rigidity is obtained.	Since differential slip occurs due to the four-point contact, a sufficient preload cannot be applied and high rigidity cannot be obtained.

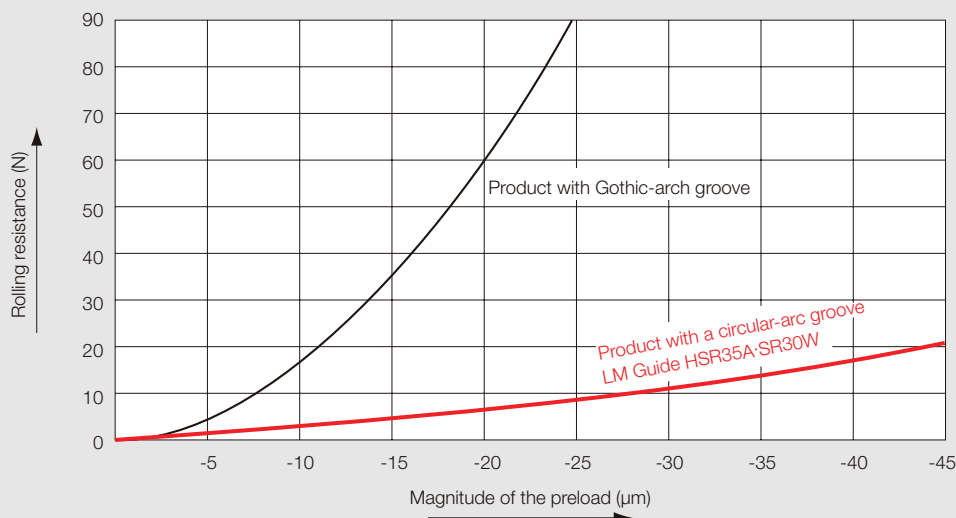

Accuracy Error of the Mounting Surface and Test Data on Rolling Resistance

The following are test data obtained by comparing an LM Guide having a four-raceway, circular-arc groove, two-point contact structure and a product having a two-row, Gothic-arch, four-point contact structure.

Sample	Conditions
(1) LM Guide	Radial clearance: $\pm 0 \mu\text{m}$
SR30W (radial type)	Without seal
HSR35A (4-way equal-load type)	Load: table mass of 30 kg
(2) Two-row Gothic-arch groove product	
Type with dimensions similar to HSR30	2 sets

Preload and rolling resistance

When a preload is applied, the rolling resistance of the Gothic-arch groove product steeply increases and differential slip occurs. Even under a preload, the rolling resistance of the LM Guide does not increase.

Features of the LM Guide 3

Superior Error-absorbing Capability with DF Structure

The LM Guide has a self-aligning capability as it has a contact structure similar to the front-to-front configuration of an angular ball bearing.

The linear guide installed flat must have the self-aligning capability as moments (M) are observed due to deviation in flatness, level error, or warped table.

LM Guide Model HSR	Competitor's similar product
<p>Since the distance between the application points of the bearing is small, the internal load generated from a mounting error is small, causing the Guide to move comfortably.</p>	<p>Since the distance between the application points of the bearing is large, the internal load generated from a mounting error is large and the self-aligning capability is small.</p> <p>For a competitor's similar linear guide with back-to-back configuration, the internal load against the blocks is about six times as large as that of a front-to-front configuration, and its service life is shortened significantly when there is deviation in flatness or a warped table. In addition, the slide resistance changes drastically.</p>

Features of the LM Guide 4

Significant Energy-saving Effect

Table 2 shows the energy consumption of a large grinder using a sliding guide and the LM Guide.
The LM Guide provides more than 10 times stronger energy saving effect.

| Table 2 | Comparison Data of Sliding and Rolling Properties

Mechanical specification			
Model	Single-axis surface grinder (Sliding guide)	Triple-axis surface grinder (Rolling guide)	
Length × Width	13m×3.2m	12.6m×2.6m	
Gross mass	17000kg	16000kg	
Table mass	5000kg	5000kg	
Grinding area	0.7m×5m	0.7m×5m	
Table guide unit	Slip by V-V guide	Roll by assembled LM Guide	

Table driving specification			Ratio
Motor used	38.05kW	3.7kW	10.3
Driving hydraulic pressure	Bore diameter Ø160×1.2MPa	Bore diameter Ø65×0.7MPa	-
Thrust	23600N	2270N	10.4
Power consumption	38kWH	3.7kWH	10.3
Driving hydraulic pressure consumption	400ℓ/year	250ℓ/year	1.6
Lubricant consumption	60ℓ/year (lubricant)	3.6ℓ/year (grease)	16.7

Comparison of used lubricant

Annual total lubricant quantity used for machine tools (Machining Center)
(Total travel distance 3000km/year)

Machine using a conventional LM Guide
Total lubricant quantity (using air oil mist)

Oil can 20L×5 + air259dm³/min

Caged Ball

Machine using an LM Guide
Total lubricant quantity (using grease)

Initial greasing 260cc
Lubrication unit, piping Not required
Air Not required
Used 2/3 of grease 400cc

Introduction of Caged Ball LM Guide

Structure and Features of the Caged Ball LM Guide

With the Caged Ball LM Guide, balls circulate being retained by the ball cage, thus to eliminate metallic contact between the balls. When balls enter or leave the loaded area of the LM block, the ball circulation part of the unloaded area of the LM block is formed with resin, which prevents metallic contact between the balls and LM block.

Therefore, the Caged Ball LM Guide reduces noise and improves the quality of the operation sound.

In addition, the grease retained in the ball circulation path and the ball cage (grease pocket) forms a very thin oil film on the ball surface by being caught by rotation of the balls.

This constantly keeps good the lubrication condition of the contact surface between each ball and the ball cage.

In addition, since the contact surface between each ball and the ball cage is a large surface contact, the surface pressure decreases significantly, which reduces heat generation and deterioration of lubricant and prolongs the service life.

The Caged Ball LM Guide can realize long service life and long-term maintenance-free operation and improve the work environment.

Caged Ball LM Guide GK Series include three types; Models SHS, SSR and SRS, which are made available.

Structural Drawing of the Caged Ball LM Guide Model SHS

Cross section of the Caged Ball LM Guide Model SSR

Without caged ball

Friction occurs between balls resulting in the generation of collision noise

With caged ball

Absence of friction between balls eliminates the generation of collision noise for quiet operation

Advantages of the Ball Cage Technology

- The absence of friction between balls, together with increased grease retention, achieves long service life and long-term maintenance-free (lubrication-free) operation.
- The absence of ball-to-ball collision achieves low noise and acceptable running sound.
- The absence of friction between balls achieves low heat generation and high speed operation.
- The circulation of lines of evenly spaced balls ensures smooth ball rotation.
- The absence of friction between balls allows high grease retention and low dust generation.

Structure and Features of Equipment Using the Caged Ball LM Guide

- Long-term maintenance-free (lubrication-free) operation
Decrease in the number of times of equipment maintenance work enables reduction in the maintenance costs.
- Improvement in the productivity
This enables high-speed usage and thus reduction in the tact time.
- Downsizing of equipment
The basic dynamic load rating is equivalent to that of one size larger full-component LM Guide, which enables downsizing of equipment and space-saving.
- The ball cage helps to align balls evenly and circulate, providing a smoother operation.
- Improvement in the work environment
This reduces the noise of equipment and thus scatter of the grease.

Test Data of the Caged Ball LM Guide

•Data on Long Service Life and Long-term Maintenance-free Operation

Use of a ball cage eliminates friction between balls and increases grease retention, thus to achieve long service life and long-term maintenance-free operation.

[Conditions]

Model No.: SHS25/HSR25

Speed: 60m/min

Stroke: 350mm

Acceleration: 9.8m/s²

Orientation: Horizontal

Load: Caged Ball LM Guide

Model SHS: 11.1kN

Conventional Full-ball Type

Model HSR: 9.8kN

GLOBAL STANDARD PRODUCTS

LM Guide **GK series**

**Rails and Blocks are individually Stocked
for Easy/Fast Interchangeability.**

Model Line up

HSR Global Standard size

A/LA

The flange of its LM block has tapped holes.

B/LB

The flange of the LM block has through holes. Used in places where the table cannot have through holes for mounting bolts.

R/LR

Having a smaller LM block width (W) and tapped holes, this model is optimal for compact design.

SHS Global Standard size / Long-term maintenance free

C/LC

The flange of the LM block has tapped holes. Can be mounted from the top or the bottom.

V/LV

With this type, the LM block has a smaller width (W) and tapped holes.

R/LR

It succeeds the height dimension of full-ball type LM Guide HSR-R.

SR Radial type

TB

The LM block has the same height as model SR-W and can be mounted from the bottom.

W

With this type, the LM block has a smaller width (W) and tapped holes.

V

A space-saving type whose LM block has the same cross-sectional shape as model SR-W, but has a smaller overall LM block length (L).

SR and SSR share a common rail.

All for smooth, accurate "movement."

To make an analogy...it is like the hands of a great pianist. THK's original technology is behind the smooth and silent movement of the "Linear Motion System".

The rotating movement of "rolling" uses bearings that have been in use in products for over 100 years.

However, the world's first "rolling" in linear movement was achieved in 1972, when THK developed the "Linear Motion System."

Since then, all THK technologies have been employed for the only purpose of providing smoothness and accuracy to "movement" of all mechanisms.

SSR Radial type / Long-term maintenance free

XTB
Since the LM block can be mounted from the bottom, this type is optimal for applications where through holes for mounting bolts cannot be drilled on the table.

XW
With this type, the LM block has a smaller width (W) and tapped holes.

XV
This type has the same cross-sectional shape as SSR-XW but has a shorter overall LM block length (L).

SRS-G Miniature Type

GM
With this type, the LM block has a smaller width (W) and tapped holes.

GN
The LM block has the same cross-sectional shape as model SRS-GM, but has a longer overall LM block length (L) and a greater rated load and permissible moment.

WGM
This type has a greater overall LM block length (L), broader width (W) and greater rated load and permissible moment than SRS-GM.

WGN
The LM block has the same cross-sectional shape as model SRS-WGM, but has an even longer overall LM block length (L) and a greater rated load and permissible moment.

SRS Miniature Type / Long-term maintenance free

M
With this type, the LM block has a smaller width (W) and tapped holes.

N
The LM block has the same cross-sectional shape as model SRS-M, but has a longer overall LM block length (L) and a greater rated load and permissible moment.

WM
This type has a greater overall LM block length (L), broader width (W) and greater rated load and permissible moment than SRS-M.

WN
The LM block has the same cross-sectional shape as model SRS-WM, but has an even longer overall LM block length (L) and a greater rated load and permissible moment.

SR and SSR share a common rail.

Selecting a Preload

LM Guide GK Series includes two radial clearance (preload).

The radial clearance greatly affects the running accuracy, load carrying capacity and rigidity of the LM Guide, it is important to select an appropriate radial clearance according to the application.

An appropriate radial clearance reduces vibrations and impact generated during the operation of the device and favorably affects the service life and the accuracy of the LM Guide.

Types of Radial Clearance

Radial clearance Preload	Radial clearance Symbol	Usage conditions
Normal clearance	No symbol	- Parts which you want to move slightly
Clearance C1 (Light preload)	C1	- Parts with little impact or vibration - Parts where LM Guide is used in a single-rail configuration - Parts which require light load and high accuracy

Accuracy Standards

The accuracy grade of the LM Guide GK Series is specified in terms of running parallelism, dimensional tolerance for height and width, and height and width difference between a pair when 2 or more LM blocks are used on one rail or when 2 or more rails are mounted on the same plane.

Models HSR and SHS

Models SR and SSR

Models SRS-G and SRS

Running of Parallelism

It refers to the tolerance for parallelism between the LM block and the LM rail reference surface when the LM block travels the whole length of the LM rail with the LM rail secured on the reference surface using bolts.

Difference in height M

Indicates a difference between the minimum and maximum values of height (M) of each of the LM blocks used on the same plane in combination.

Difference in width W_2

Indicates a difference between the minimum and maximum values of the width (W_2) between each of the LM blocks, mounted on one LM rail in combination, and the LM rail.

Lubrication

When using the LM Guide, be sure to lubricate it well.

If traveling is carried out without lubrication or the lubrication runs out during traveling, the wear of the balls and ball rolling elements, which shortens the service life.

The lubricant has the following roles:

- (1) Minimizes friction in the traveling unit to prevent seizure and reduce wear.
- (2) Forms an oil film on the raceway to decrease stress acting on the surface and extend rolling life.
- (3) Covers the metal surface to prevent rust formation.

To fully bring out the LM Guide's functions, it is necessary to provide lubrication according to the conditions.

LM Guide GK Series has lithium soap-based grease (AFB-LF grease) contained as standard.(SRS-G/SRS : Only antirust oil)

●Precautions

- Do not use a mix of lubricants with different physical properties. Mixing lubricants using the same type of thickening agent may still cause mutually adverse impacts on the two lubricants if they use different additives, etc.
- The properties of lubricant deteriorate and its lubrication performance drops over time. Lubricants must be checked and added properly according to the use frequency of the machine.
- The appropriate lubrication schedule will depend on usage conditions and the surrounding environment. In general, the unit should be lubricated after every 100 kilometers of operation (every 3 to 6 months) in the case of the full-component LM Guide. Set the final lubrication interval/amount based on the actual machine.
- If the mounting orientation of the LM Guide is other than horizontal use (i.e., vertical, wall and inverted mount), the lubricant may not reach the raceway completely. Be careful.

Lubrication Methods Manual Greasing

Generally, grease is replenished periodically, fed through a grease nipple provided on the LM block, using a grease gun.

Fig.4 Lubrication Using a Grease Gun

Lubrication Equipment

Grease Gun Unit MG70

Grease Gun Unit MG70 is capable of lubricating small to large models by replacing dedicated nozzles (attached). For small models, dedicated attachments are provided. The user can select from these attachments according to the model number and the installation space.

Grease Gun has a slit window, allowing the user to check the remaining amount of grease.

Since a 70g type of THK original grease is contained in a bellows cartridge, you can install it on the grease gun unit and replace it without soiling your hand.

Grease Nipple Model No.	Type	Dimensional Drawing

B-M6F	Type H	
B-R1/8 (B-PT1/8)		

THK Original Grease AFB-LF Grease

- Base Oil: Refined Mineral Oil
- Consistency Enhancer: Lithium-based

AFB-LF Grease is a general-purpose grease developed with a lithium-based consistency enhancer using refined mineral oil as the base oil. It excels in extreme pressure resistance and mechanical stability.

●Features

- (1) **High Extreme Pressure Resistance**
Compared with lithium-based greases available on the market, AFB-LF Grease has higher wear resistance and outstanding resistance to extreme pressure due to the action of a special additive.
- (2) **High Mechanical Stability**
AFA Grease is not easily softened and demonstrates excellent mechanical stability even when used for a long period of time.
- (3) **High Water Resistance**
Compared with ordinary lithium grease, this product is a highly water resistant grease with minimal softening due to moisture penetration and very little deterioration under extreme pressures.
- (4) **Long Service Life**
It provides many times the lubrication life of lithium soap-based greases. As a result, it offers a lower maintenance workload and greater economy due to the longer intervals between greasing.

•Representative Physical Properties

Item		Representative Physical Property Value	Test Method
Consistency enhancer		Lithium-based	
Base oil		Refined mineral oil	
Base oil kinematic viscosity: mm ² /s (40°C)		170	ISO 2137 ISO 2176 ISO 6743 ISO 11009 ISO 12924
Worked penetration (25°C, 60W)		275	
Mixing stability (100,000 W)		345	
Dropping point °C		193	
Evaporation amount: mass% (99°C, 22 h)		0.4	
Oil separation rate: mass% (100°C, 24 h)		0.6	
Copper plate corrosion (B method, 100°C, 24 h)		Accepted	
Low temperature torque: mN·m (-20°C)	When starting up	130	
	When revolving	51	
4-ball test (fusion load): N		3089	ASTM D2596
Temperature range °C		-15 to 100	
Appearance color		Brownish yellow

Grease Nipple

THK provides various types of grease nipples needed for the lubrication of LM systems.

Model PB1021B

Model B-M6F (M6×0.75)

Model B-R1/8
(Model B-PT1/8)

Note) LM Guide GK Series has a grease nipple. (Not attached to the LM block)

Attach a grease nipple when mounting the LM Guide. Attach a bundled plug to the opposite side of the LM block.

Contamination Protection

Contamination Protection Accessories to Attach to LM Blocks

If any foreign materials enter the LM Guide, abnormal wear and ball clogging becomes easier to occur, which shortens the service life. Therefore, it should be protected from contamination by the foreign materials entered.

LM Guide GK Series have an end seal and side seal (Contamination protection accessory symbol : SS (SRS : "UU")) as standard.

•End Seal

This is a general seal to attach to both ends of a LM block.

Attach this in normal environments (atmosphere and room temperature) and contaminated environments (dust and cutting chips).

One of its purposes is to remove dust from the upper face and side face of the LM rail.

In addition to contamination protection, it is also a purpose to retain the lubricant in the LM block.

•Side Seal

This is a general seal to attach to the lower part of a LM block.

Attach this in normal environments (atmosphere and room temperature) and contaminated environments (dust and cutting chips).

Its purpose is to prevent entrance of dust from the bottom of the LM block.

This contamination protection accessory is especially useful for environments where the mounting orientation is inverted mount or dust flutters.

Contamination Protection Accessories to Attach to LM Rail

•Dedicates Cap C (C Cap)

This is a special resin cap to block the mounting holes of the LM rail.

Preventing any influx of cutting chips, foreign material, or coolant into the LM blocks from the top face of the LM rail, coupled with the use of seals, will improve the contamination protection performance for the LM guide.

•Mounting method

The procedure for inserting a C cap into a mounting hole consists of using a flat aligning fitting to gradually punch the cap into the hole until it is level with the upper surface of the LM rail, as shown in the figure. Fit C caps without removing the LM rail from the LM block.

Mounting the LM Guide

Markings on the Reference Surface

LM Guide has a reference surface.

The accuracy grade of the LM Guide is specified based on the reference surface.

The reference surface of the LM block is opposite to the surface marked with the THK logo and the model No. while the reference surface of the LM rail is on the bottom of the LM rail marked with a line.

Fig.5 Reference surface of the LM Guide

Combined Use of an LM Rail and LM Blocks

Combine so that the reference surface of the LM rail and LM blocks should face the same direction.

Fig.6 Combined Use of an LM Rail and LM Blocks

Note) LM Guide GK Series has a grease nipple. (Not attached to the LM block)

Attach a grease nipple when mounting the LM Guide. Attach a bundled plug to the opposite side of the LM block.

Installing the LM Blocks

Use the bundled removing/mounting jig when mounting the LM blocks to the LM rail in its assembly, etc.

When the LM blocks are inserted into the LM rail without using the removing/mounting jig, balls may drop out from an LM block due to entered foreign materials, damaged internal components, or slight tilt. Using the LM Guide with some of the balls missing may cause damage at an early stage.

Align the removing/mounting jig to the end face of the LM rail without tilting or separating when used. (See Fig.7)

The removing/mounting jig is not provided as standard. To use the jig, contact THK.

Also contact THK when balls drop out during mounting.

Fig.7 Installing the LM Blocks

Shoulder Height of the Mounting Base and the Corner Radius

The mounting surface and reference surface of the LM rail and LM block are ground to support highly accurate positioning.

To assemble the LM Guide correctly, there are guideline dimensions for the "height of the datum shoulder" and "corner radius r " of the table and base for each LM Guide type and size.

Model HSR

LM rail section

LM block section

Unit: mm

Model No.	Corner radius for the LM rail $r_1(\text{max})$	Shoulder height for the LM rail H_1	Shoulder height for the LM block H_2	H_3
15	0.5	3	4	4.7
20	0.5	3.5	5	4
25	1	5	5	5.5
30	1	5	5	7
35	1	6	6	7.5

Precautions on Using the LM Guide

[Handling]

- (1) Please use at least two people to move any product weighing 20 kg or more, or use a dolly or another conveyance. Otherwise, it may cause injury or damage the unit.
- (2) Do not disassemble the parts. Otherwise, it may reduce functionality.
- (3) Tilting an LM block or LM rail may cause them to fall by their own weight.
- (4) Take care not to drop or strike the LM Guide. Otherwise, it may cause injury or damage the unit. If the product is dropped or impacted, functionality may be reduced even if there is no surface damage.
- (5) Do not remove the LM block from the LM rail during setup.
- (6) Do not insert fingers into the mounting holes on the LM rail, as they could get caught between the rail and the LM block, resulting in injury.
- (7) To ensure personal safety, wear gloves and protective footwear when handling this product.

[Precautions on Use]

- (1) Prevent foreign material, such as cutting chips or coolant, from entering the product. This may also cause damage to the product.
- (2) If the product is used in an environment where cutting chips, coolant, corrosive solvents, water, etc., may enter the product, use bellows, covers, etc., to prevent them from entering the product.
- (3) Do not use the product at temperature of 80°C or higher. Unless the unit is specially designed to be heat-resistant, exposure to such temperatures may deform or damage plastic and rubber parts.
- (4) If foreign material such as cutting chips adheres to the product, replenish the lubricant after cleaning the product.
- (5) Micro-strokes can inhibit the formation of a film of oil between the raceways and the ball, resulting in fretting. So use grease with high fretting resistance. THK recommends periodically making stroke movement of about the length of the LM block to help ensure that a film forms on the raceways and balls.
- (6) Do not forcibly drive a pin, key, or other positioning device into this product. This may generate permanent deformation on the raceway, leading to loss of functionality.
- (7) If, for operational reasons, it becomes absolutely necessary to remove the LM block from the LM rail and reattach it, a special mounting jig must be used for this purpose. (The removing/mounting jig is not provided as standard. When desiring to use it, contact THK.)
- (8) Position the mounting jig so that one end abuts the end of the LM rail. When the rail and the jig are exactly aligned, the LM block can be loaded onto the rail.
- (9) Take care to keep the LM block straight. Loading the block at an angle can introduce foreign material, damage internal components, or cause balls to fall out.
- (10) The LM block must contain all its internal rolling elements (balls) when mounted on the LM rail. Using a block with any balls removed may result in premature damage.
- (11) If any of the balls falls from the LM block, contact THK instead of using the product.
- (12) If the endplate is damaged due to an accident, etc., balls may fall out or the LM block may become detached from the LM rail and drop. If the LM Guide will be used hanging upside down, take preventive measures such as adding a safety mechanism to prevent falls.
- (13) If the durability of the mounting parts are insufficient and the mounting accuracy is bad, an unexpected load will be applied to the LM block, which may cause damage at an early stage. Accordingly, give sufficient consideration to the rigidity/accuracy of the housing and the base.
- (14) When removing the LM block from the LM rail and then replacing the block, an LM block mounting/removing jig that facilitates such installation is available. Contact THK for details.

[Lubrication]

- (1) Thoroughly wipe off anti-rust oil and feed lubricant before using the product.
- (2) Do not use a mix of lubricants with different physical properties. Mixing greases using the same type of thickening agent may still cause adverse interaction between the two greases if they use different additives, etc.
- (3) When using the product in locations exposed to constant vibrations or in special environments such as clean rooms, vacuum and low/high temperature, use the grease appropriate for the specification/environment.
- (4) To lubricate a product that has no grease nipple or oil hole, apply lubricant directly to the raceway surface and execute a few preliminary strokes to ensure that the interior is fully lubricated.
- (5) Lubricant viscosity can vary depending on the temperature. Take note that the slide resistance and torque of the LM Guide also changes as the consistency of grease changes.
- (6) After lubrication, the slide resistance and torque of the LM Guide may increase due to the agitation resistance of grease. Be sure to perform a break-in to let the grease spread fully, before operating the machine.
- (7) Excess lubricant may spatter immediately after lubrication. If necessary, wipe off any spattered grease.
- (8) The properties of grease deteriorate and its lubrication performance drops over time. Grease must be checked and added properly according to the use frequency of the machine.
- (9) Although the lubrication interval may vary according to use conditions and the service environment, lubrication should be performed approximately every 100 km in travel distance (three to six months). Set the final lubrication interval/amount based on the actual machine.
- (10) If the installation direction is other than horizontal use, the lubricant may not reach the raceway completely.
- (11) When adopting oil lubrication, the lubricant may not be distributed throughout the LM block depending on the installation direction of the block. Contact THK in advance for details.

[Storage]

When storing the LM Guide, enclose it in a package designated by THK and store it in a room in a horizontal orientation while avoiding high temperature, low temperature and high humidity.

After the product has been in storage for an extended period of time, lubricant inside may have deteriorated, so add new lubricant before use.

[Disposal]

Dispose of the product properly as industrial waste.

LIMITED WARRANTY

LIMITED WARRANTY AND LIMITATION OF LIABILITY: THK CO. LTD., FOR ITSELF AND ITS RELATED COMPANIES AND SUBSIDIARIES (HEREINAFTER DESCRIBED COLLECTIVELY AS "THK") WARRANTS THAT ALL THK PRODUCTS SOLD WILL BE FREE OF DEFECTS IN MATERIALS AND WORKMANSHIP FOR A PERIOD OF TWELVE (12) MONTHS FROM DATE OF DELIVERY. THE FOREGOING TWELVE (12) MONTH WARRANTY SHALL NOT BE EXTENDED OR CHANGED BY THK FURNISHING ANY REPLACEMENTS, ADDITIONS, ATTACHMENTS, ACCESSORIES OR REPAIRS TO THE PRODUCT SUBSEQUENT TO THE DATE OF DELIVERY OR ACCEPTANCE. THE FOREGOING WARRANTY IS THE SOLE AND EXCLUSIVE WARRANTY OF THK REGARDING THE PRODUCT.

DISCLAIMER OF OTHER WARRANTIES: OTHER THAN THE FOREGOING WARRANTY, THERE ARE NO EXPRESS OR IMPLIED WARRANTIES OR ANY AFFIRMATIONS OF FACT OR PROMISES BY THK WITH RESPECT TO THE PRODUCT. THK DISCLAIMS ANY WARRANTIES, EXPRESS, IMPLIED OR STATUTORY, NOT SPECIFICALLY SET FORTH ABOVE. WITHOUT LIMITING THE GENERALITY OF THE FOREGOING, THK EXPRESSLY DISCLAIMS ANY IMPLIED WARRANTIES OF MERCHANTABILITY, FITNESS FOR ANY PARTICULAR PURPOSE, INFRINGEMENT OR ANY REPRESENTATIONS OF FACT OR QUALITY NOT EXPRESSLY SET FORTH HEREIN.

LIMITATION OF LIABILITY AND REMEDIES: THK'S SOLE RESPONSIBILITY AND LIABILITY INCURRED AS A RESULT OF THE SALE AND/OR USE OF THE PRODUCT, AND THE PURCHASER'S EXCLUSIVE REMEDY AGAINST THK UNDER ANY WARRANTY SHALL BE LIMITED TO THE REPAIR OR REPLACEMENT, AT THK'S OPTION, OF PRODUCT COMPONENTS NOT CONFORMING TO THE WARRANTY. THE TOTAL LIABILITY OF THK SHALL IN NO EVENT EXCEED THE AMOUNT ACTUALLY PAID TO THK BY PURCHASER WITH RESPECT TO THE PRODUCT. THIS LIMITATION OF REMEDY IS INTENDED BY THE PARTIES TO SURVIVE EVEN IF THE REMEDY IS CLAIMED TO HAVE FAILED OF ITS ESSENTIAL PURPOSE. PURCHASER'S FULL AND COMPLETE PERFORMANCE OF ALL OBLIGATIONS OF PURCHASER RECITED IN THIS AGREEMENT IS A CONDITION PRECEDENT TO THK'S WARRANTY OBLIGATIONS AND LIABILITIES HEREIN.

PURCHASER'S DAMAGES AND LIMITATIONS: IN NO EVENT SHALL THK BE LIABLE TO PURCHASER, ITS ASSIGNS OR AGENTS, FOR ECONOMIC LOSS, INCIDENTAL OR CONSEQUENTIAL DAMAGES, IN CONTRACT OR IN TORT, INCLUDING BUT NOT LIMITED TO, ANY DAMAGES FOR LOST PROFITS, DOWN-TIME, LOST PRODUCTION, FAILURE TO MEET PURCHASER'S SALES CONTRACTS, OR DEFECTS IN PURCHASER'S MATERIALS OR WORKMANSHIP ARISING DIRECTLY OR INDIRECTLY FROM THE USE OF THE PRODUCT.

DISCLAIMER

This Catalog provides basic information relating to THK linear motion and related products. The Catalog, including all information, charts, formulas, factors, accuracy standards, tolerances and application recommendations contained herein, is only a starting point for the customer's selection of appropriate products, and may not apply in all intended applications. The Catalog is not a substitute for a proper application analysis conducted by an experienced, knowledgeable design engineer. Product selection should be based upon your specific application needs and conditions, which will vary greatly depending on many factors. No specific product application should be based solely on the information contained in this Catalog. All purchases of THK Products are subject to the limited warranty offered by THK Co., Ltd, for itself and on behalf of its related companies and subsidiaries. Customers should confirm independently that a contemplated application is safe, appropriate and effective.

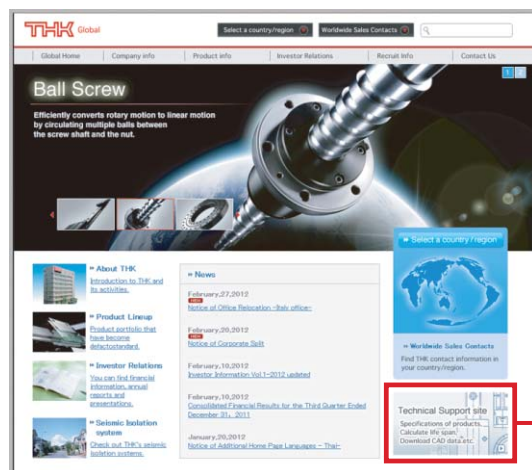

"All trademarks used in this Catalog are registered trademarks in the Country of Japan. If there is any question as to the validity of such trademarks outside of Japan, an inquiry should be made in that particular country."

Technical Support Site

The THK Technical Support Site lets you access product information and technical support online. You will also find a search feature for locating desired products and a calculation feature for calculating service life. 2D-CAD and 3D-CAD data are also downloadable.

FAQ

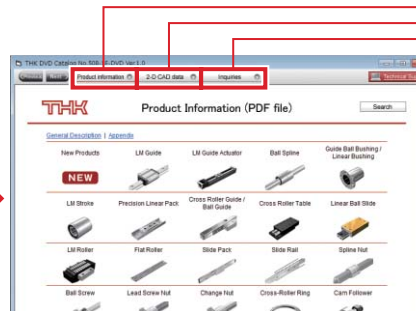

Contains frequently asked questions.

Linear Motion System DVD Catalog

Linear Motion System DVD Catalog is also available. Please contact THK, distributors or other purchasable contacts in your area for a request.

Please choose your preferred language.

Displays product information.

Enables you to use 2-D CAD data (DXF files).

Enables you to use 3-D CAD data.

Product information (PDF file)

Contains catalog PDF data for new products and mechatronic products, in addition to the product information contained in the General Catalog.

2-D CAD data (DXF file)

You can use 2-D CAD data (DXF files) for approximately 4,000 products.

3-D CAD data generation program

This function enables you to use 3-D CAD data.

Selectable options and specifications

By combining product model numbers and options, you can generate 3-D CAD data tailored to your specifications.

3-D CAD and 2-D CAD data

You can then quickly and easily import the generated 3-D CAD data into your 3-D CAD software. 2-D CAD data can also be generated with this program.

CAD type	Formats supported
3-D CAD	DXF 3D / IGES / SAT / STEP Solidworks 2013, 2014, 2015, Macro 3D
2-D CAD	DXF Version 2004-2015
